

Personal Experience

When I first knew about SPE, I thought that this society would be a great place to get to know people who work in petroleum industry. After I became a part of Thailand SPE, this program offers me, not only an opportunity to network, but also an excellent learning environment. During SPE monthly meetings, where everyone presents their projects, I was always fascinated by innovative ideas in developing new technologies for a better energy production. With an exposure to various developing projects, I learn how to approach a problem and begin my thought process logically.

In addition to learning from professionals, my SPE petroleum field trip has been a rewarding experience. With support and guidance from the SPE board of directors, I feel more confident working independently on my own project. The program also allowed me to develop a great friendship with students from other technical programs and acquire necessary skills to work in collaboration. My experience as a participant in SPE scholarship program has both broadened my knowledge and strengthened my resolve to continue pursuing a career in energy industry.
